

By rotating the bottom handlebar clamp 180 degrees you will offset the handlebar toward or away from the rider. If there is only 1 set of bottom handlebar clamp holes in your triple clamp, then toward the rider is position #1 and away is position #2. If there are 2 sets of bottom handlebar clamp holes in your triple clamp, then toward the rider in the far holes is position #3 and away is position #4. Position #1 being closest to the rider and in this case position #4 is farthest from the rider.
